Idea/Approach Details

Ministry Category : Ministry of Road Transport and Highways

Problem Statement : Ambulance Service on National Highway   Problem Code : #RH1

Team Leader Name : Akash Karthick N   College Code : 1115

In India,many people die due to delayed medical attention. One of the most important reason for this delay is Ambulances which rarely reach on time. This location based app will aggregate ambulance providers(hospitals,Govt. agencies, private providers etc.). Upon use, it will pick nearest available ambulance and assign the driver, a shortest possible route to reach out to the person in need and take patient to nearest hospital. The app will assign the driver ,nearest hospital & it's route based on patient's problem & condition. The user can also be able to call(voice call) the ambulance service directly via this app. This app will also alert hospital staffs so that they are ready with all the necessary formalities & equipment before the patient reaches hospital.

CLIENT SIDE:

Native Application in ios
Swift 3

SERVER SIDE:

Apache/Tomcat Server
MySql Database
Firebase
